PROFESSIONAL SUMMARY

Software Engineer focused on Flutter and cross-platform mobile product development, with hands-on experience across Android, iOS, backend APIs, cloud services, CI/CD, and production releases. I take products from initial idea and requirements through architecture, implementation, testing, deployment, and ongoing maintenance. Strongly experienced with AI-assisted engineering using OpenAI Codex and Claude Code for rapid implementation, debugging, refactoring, testing, documentation, and problem solving, while maintaining ownership of technical decisions and final product quality. Experienced in building and publishing independent apps as well as contributing to production products at Laennec AI.

CORE ENGINEERING STRENGTHS

Product Engineering	End-to-end ownership • Architecture • Feature development • Debugging • Testing • Release & maintenance
Mobile	Flutter • Dart • Android • Kotlin • Jetpack Compose • iOS • Swift • Xcode • TestFlight
AI-Assisted Engineering	OpenAI Codex • Claude Code • Cursor AI • AI-assisted implementation, refactoring, debugging & testing
Backend & Cloud	REST APIs • Firebase • Google Cloud Platform • Python Flask • Authentication • API integration
Architecture & Data	BLoC • Provider • GetX • Hive • Sqflite • Clean architecture practices
Delivery	Git • GitHub • GitHub Actions • CI/CD • Play Store publishing • iOS TestFlight/App Store workflows

PROFESSIONAL EXPERIENCE

Software Engineer — Laennec AI

April 2025 – Present

- Build and maintain production mobile applications using Flutter, with native Android development in Kotlin/Jetpack Compose and iOS development using Swift/Xcode.
- Own features across the product lifecycle — translating requirements into technical solutions, implementing features, integrating APIs, testing, debugging, release preparation, and post-release maintenance.
- Use OpenAI Codex and Claude Code extensively as engineering copilots for implementation, code exploration, refactoring, debugging, test generation, documentation, and accelerating delivery.
- Build and integrate backend functionality using Python Flask APIs, REST APIs, Firebase, and Google Cloud services.
- Implement and maintain CI/CD workflows using GitHub Actions and Google Cloud, supporting repeatable builds and releases.
- Contribute to production-quality architecture, performance improvements, maintainability, and reliable user-facing features.

Selected products at Laennec AI

- Zorgm Pro — Clinical assistant for doctors, providing answers to clinical questions using medical protocols, treatment guidelines, and peer-reviewed research.
- Zorgm Health Coach — Health companion providing source-backed answers to everyday health questions, including conditions, symptoms, medications, and healthy living.
- Zorgm Digital Steth — Mobile application supporting Laennec AI’s digital stethoscope product.

INDEPENDENT PRODUCT PORTFOLIO

Beyond professional work, I independently build, test, publish, and maintain mobile products. These projects demonstrate practical ownership of product development rather than only isolated feature work.

Published & Hobby Projects

- Debt Tracker

Flutter financial tracking app with biometric authentication, local Sqflite storage, Google Drive backup/restore, data protection, multi-currency support, and BLoC state management. Published on Google Play; the current listing shows 500+ downloads.
View app on Google Play →

- Social Media Platform (Klik)

Flutter social application with real-time chat using WebSocket, BLoC state management, Firebase Google Sign-In, REST API integration, and Node.js backend integration.

- Ultimate Pet Lover's App

Flutter app for cat and dog care, including vaccination and medication schedules, reminders/notifications, and Gemini AI assistance.

- Additional hobby projects

Multiple smaller applications and experiments covering productivity, weather, inventory, entertainment APIs, student management, and native Android development.

Google Play Developer Profiles

Ghonestapps — Published Apps → https://play.google.com/store/apps/developer?id=Ghonestapps
Second developer portfolio → https://play.google.com/store/apps/dev?id=5477229522512979986

AI-ASSISTED DEVELOPMENT

- OpenAI Codex + Claude Code: deeply integrated into day-to-day engineering for code generation, repository exploration, architecture assistance, debugging, refactoring, test creation, documentation, and rapid prototyping.
- End-to-end delivery: use AI tools to accelerate implementation while personally handling requirements, architecture decisions, integration, testing, release configuration, store submission, and final verification.
- Cross-platform shipping: experienced in building and publishing mobile applications across Android and iOS, including iOS build/release workflows using Xcode/TestFlight.
- Product mindset: comfortable taking an idea from an early concept to a usable, published product and iterating based on real-world requirements.

SELECTED TECHNICAL PROJECTS

Student Management App	Provider + SQLite
Weather App	BLoC + Weather API
Inventory App	Firebase + PDF/Excel reporting
Netflix Clone	TMDB API + dynamic content
BMI Calculator	Kotlin + Jetpack Compose

EDUCATION

Bachelor of Computer Applications (BCA)	Mangalayatan University	2023 – Ongoing
Flutter Development Program	Brototype	2023 – 2025

ADDITIONAL

Languages: Dart, Kotlin, Swift (working knowledge) • Tools: Android Studio, Xcode, VS Code, Figma, Postman, Git, GitHub • Platforms: Android, iOS, Windows, macOS, Linux
